**Please read all conditions and responsibilities listed on the reverse side of this application form. I hereby declare that I have read the conditions and that I agree to abide by the terms.**

Signature of Applicant: \_\_\_\_\_

Date: \_\_\_\_\_

Signature of registered Landowner: \_\_\_\_\_  
(if different than applicant)

Date: \_\_\_\_\_

## Terms and Conditions

- Program:** This program deals with the stabilization of stream and river banks by means of armoring the eroding banks with rock rip-rap or other stabilizing material, and the establishment of a 10 metre buffered riparian area where trees and/or other vegetation may be planted to further stabilize the affected area.
- Objective:** To stabilize eroding stream and river banks to prevent or control erosion of the banks and adjacent land, and reduce the amount of nutrient and sediment being deposited into streams, rivers and lakes throughout the Intermountain Conservation District. The program will help protect property and yardsites by stabilizing stream and river banks from continued erosion.
- Eligibility:** The channel must be a natural watercourse with banks that require stabilization to prevent further channel erosion, or erosion to adjacent property, and can be stabilized through the placement of rip-rap materials and/or vegetation.
- Assistance:** Funding for approved Streambank Stabilization Projects will be cost-shared in the ratio of 40% applicant, and 60% Intermountain Conservation District. Applicant will be required to make a down payment of 50% of his estimated contribution prior to the project being started.

### **General Information:**

- All projects are to be approved by the IMCD prior to construction and are subject to available funding.
- All necessary approvals will need to be in place prior to construction.
- The Conservation District shall determine application priorities in consultation with Sub-district, Board and Staff.
- Engineering and technical service for project design, construction and maintenance will be subject to the availability of funding and/or staff. The Intermountain Conservation District reserves the right to establish priorities for providing such services and assistance.
- Other remedial actions, aside from, or in addition to streambank armoring, may include other erosion control efforts, construction of pool-and-riffle structures, drop structures, and/or any necessary land treatment, including the restoration of a treed riparian area, so as to minimize the risk of further on-site and/or downstream problems.
- IMCD reserves the right for reasonable access to the project site for inspection and to promote the program.
